	Stony Spot		

MAP INFORMATION

Map Scale: 1:7,030 if printed on A size (8.5" x 11") sheet.
The soil surveys that comprise your AOI were mapped at 1:15,840.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for accurate map measurements.

Web Soil Survey URL: <http://websoilsurvey.nrcs.usda.gov>
Coordinate System: UTM Zone 16N NAD83

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Livingston County, Illinois
Survey Area Data: Version 6, Sep 26, 2012

Date(s) aerial images were photographed: 7/31/2007

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

Map Unit Legend (Wayne Fieldman)

Livingston County, Illinois (IL105)			
Map Unit Symbol	Map Unit Name	Acres in AOI	Percent of AOI
102A	La Hogue loam, 0 to 2 percent slopes	8.7	5.5%
141A	Wesley fine sandy loam, 0 to 2 percent slopes	2.2	1.4%
293A	Andres silt loam, 0 to 2 percent slopes	25.4	16.2%
294B2	Symerton loam, 2 to 5 percent slopes, eroded	3.0	1.9%
594A	Reddick clay loam, 0 to 2 percent slopes	116.4	74.3%
614A	Chenoa silty clay loam, 0 to 2 percent slopes	1.0	0.7%
Totals for Area of Interest		156.7	100.0%

Map Unit Descriptions (Wayne Fieldman)

The map units delineated on the detailed soil maps in a soil survey represent the soils or miscellaneous areas in the survey area. The map unit descriptions, along with the maps, can be used to determine the composition and properties of a unit.

A map unit delineation on a soil map represents an area dominated by one or more major kinds of soil or miscellaneous areas. A map unit is identified and named according to the taxonomic classification of the dominant soils. Within a taxonomic class there are precisely defined limits for the properties of the soils. On the landscape, however, the soils are natural phenomena, and they have the characteristic variability of all natural phenomena. Thus, the range of some observed properties may extend beyond the limits defined for a taxonomic class. Areas of soils of a single taxonomic class rarely, if ever, can be mapped without including areas of other taxonomic classes. Consequently, every map unit is made up of the soils or miscellaneous areas for which it is named and some minor components that belong to taxonomic classes other than those of the major soils.

Most minor soils have properties similar to those of the dominant soil or soils in the map unit, and thus they do not affect use and management. These are called noncontrasting, or similar, components. They may or may not be mentioned in a particular map unit description. Other minor components, however, have properties and behavioral characteristics divergent enough to affect use or to require different management. These are called contrasting, or dissimilar, components. They generally are in small areas and could not be mapped separately because of the scale used. Some small areas of strongly contrasting soils or miscellaneous areas are identified by a special symbol on the maps. If included in the database for a given area, the contrasting minor components are identified in the map unit descriptions along with some characteristics of each. A few areas of minor components may not have been observed, and consequently they are not mentioned in the descriptions, especially where the pattern was so complex that it was impractical to make enough observations to identify all the soils and miscellaneous areas on the landscape.

Custom Soil Resource Report Map—Nonirrigated Capability Class

Table—Nonirrigated Capability Class

Nonirrigated Capability Class— Summary by Map Unit — Livingston County, Illinois (IL105)				
Map unit symbol	Map unit name	Rating	Acres in AOI	Percent of AOI
102A	La Hogue loam, 0 to 2 percent slopes	2	8.7	5.5%
141A	Wesley fine sandy loam, 0 to 2 percent slopes	2	2.2	1.4%
293A	Andres silt loam, 0 to 2 percent slopes	1	25.4	16.2%
294B2	Symerton loam, 2 to 5 percent slopes, eroded	2	3.0	1.9%
594A	Reddick clay loam, 0 to 2 percent slopes	2	116.4	74.3%
614A	Chenoa silty clay loam, 0 to 2 percent slopes	1	1.0	0.7%
Totals for Area of Interest			156.7	100.0%

Rating Options—Nonirrigated Capability Class*Aggregation Method: Dominant Condition**Component Percent Cutoff: None Specified**Tie-break Rule: Higher***Vegetative Productivity**

Vegetative productivity includes estimates of potential vegetative production for a variety of land uses, including cropland, forestland, hayland, pastureland, horticulture and rangeland. In the underlying database, some states maintain crop yield data by individual map unit component. Other states maintain the data at the map unit level. Attributes are included for both, although only one or the other is likely to contain data for any given geographic area. For other land uses, productivity data is shown only at the map unit component level. Examples include potential crop yields under irrigated and nonirrigated conditions, forest productivity, forest site index, and total rangeland production under of normal, favorable and unfavorable conditions.

Yields of Non-Irrigated Crops (Map Unit): Corn (Bu)

These are the estimated average yields per acre that can be expected of selected nonirrigated crops under a high level of management. In any given year, yields may be higher or lower than those indicated because of variations in rainfall and other climatic factors.
